“Improving the seasonal cycle and interannual
variations of biomass burning aerosol sources” by
Generoso et al.” by L. Giglio and J. D. Kendall**

L. Giglio and J. D. Kendall

Received and published: 20 February 2004

We thank M. Schultz for his helpful review, and S. Generoso for repeating her analysis with our data set. Regarding the first suggestion of Dr. Schultz, we will correct our statements about the seasonality of burning as we described in our reply to J.-M. Grégoire. His additional suggestion to perhaps name some of the shortcomings of our own product is entirely appropriate and one that we will consider. Our only minor concern is that we not duplicate material previously published about this topic in Giglio et al. (2003) and the documentation accompanying our data set.

Giglio, L., Kendall, J. D., and Mack, R., A multi-year active fire data set for the tropics derived from the TRMM VIRS, *Int. J. Remote Sensing*, 24, 4505-4525, 2003.
