

## ***Interactive comment on “A review of the Match technique as applied to AASE-2/EASOE and SOLVE/THESEO 2000” by G. A. Morris et al.***

### **Anonymous Referee #2**

Received and published: 31 August 2004

This is a preliminary comment on technical issues with the Figures. Insofar as I am hoping that the main issue can be rectified *during* the discussion period, I wanted to make this comment as early as possible.

Figure 2 is obviously incorrect in the published ACPD paper. It is just a repetition of Fig. 1!

Figures 3.-5. are a bit strange insofar as five tick-marks appear between e.g. 0 and  $-5$ . (In contrast to the other figures where there are four, as expected).

Finally, Figures 3.-5. have a much larger  $y$ -range than the dynamic range of the data, so that the plots show quite a lot of “white space”.
