

Interactive comment on “Microphysics and heterogeneous chemistry in aircraft plumes – high sensitivity on local meteorology and atmospheric composition” by S. K. Meilinger et al.

Anonymous Referee #1

Received and published: 4 October 2004

General comments: I think that this is a paper worthy of publication addressing an interesting topic.

Specific Comments: It is a shame that the authors did not choose to include the chemical effects of the carbonaceous aerosols included in their microphysics.

Typos: In the second sentence of the abstract my version of the article started with a typo, I think it should read "two" instead of "Tow".
