

Interactive comment on “Comparison of raingauge observations with modeled precipitation over Cyprus using Contiguous Rain Area analysis” by N. Tartaglione et al.

N. Tartaglione et al.

Received and published: 11 July 2005

General comments:

We absolutely agree with the referee, we stressed in the conclusions that automated and unsupervised verification by CRA method should not be done when the verification region is small compared to the rain system itself.

We addressed all specific comments:

1. We changed the sentence describing the nesting procedure
2. We specified the meaning of "shifting value"

3. We changed the sentence in accordance with suggestions of referee
4. and 5. We agree with referee and added a reference to Grams et al. (2004)
6. We replaced "could" with "might"
