

Interactive comment on “The bi-directional exchange of oxygenated VOCs between a loblolly pine (*Pinus taeda*) plantation and the atmosphere” by T. Karl et al.

T. Karl et al.

Received and published: 18 October 2005

We want to thank all reviewers for their effort and appreciate comments raised by all 3 reviewers which helped to improve and clarify the manuscript. We added new measurements of ozone uptake and also added one additional co-author (Rei Rasmussen). We do not share views of reviewer 2 who suggests omitting field measurements entirely. We give a comment by comment response to all reviewers and think that we have addressed all major concerns raised during the review period.
