

Interactive comment on “Small-scale gravity waves in ER-2 MMS/MTP wind and temperature measurements during CRYSTAL-FACE” by L. Wang et al.

L. Wang et al.

Received and published: 17 December 2005

I should have put the contents of “**SC S4549**” to here. Anyway, I would like to add that the histogram plot of $|\delta|$ can be downloaded from the following link:

<ftp://cora.nwra.com/pub/lwang/histogram-delta.pdf>

Values of δ generally cluster around 0° or 180° . There are a few events with $|\delta|$ more or less close to 90° . This is consistent with Fig. 10 showing that there are also several relatively low frequency events.
