

Interactive comment on “Overview of the European project FUMAPEX” by A. Baklanov

Anonymous Referee #1

Received and published: 23 December 2005

The paper describes basic points of the European project FUMAPEX and its main results. By definition (and title) it is a sort of brief review forewording an ACP special thematic issue. The project itself is quite impressive cooperative activity based on novel concepts and tools and devoted to important issues. Air pollution episodes in quite a number of European cities were analyzed in course of the project performance. Both, the list of project scientific achievements and list of FUMAPEX publications are providing a reader with a useful guide to frontiers of atmospheric sciences and its environmental applications. I think that this paper allows ACP readers to get impression on scale of the project, quality of work done and results obtained, which means that it performs its mission.
