

Interactive comment on “The semianalytical cloud retrieval algorithm for SCIAMACHY II. The application to MERIS and SCIAMACHY data” by A. A. Kokhanovsky et al.

A. A. Kokhanovsky et al.

Received and published: 27 May 2006

The calibration problems will be mentioned in the abstract and a more detailed discussion of the calibration correction will be done for the conclusions. Earlier studies will be discussed in details. The solar zenith angle is of a minor importance for the calibration problem studied. The official level2 data product of MERIS was not used by us. This will be clarified in the paper. We see no point to cite the FRESCO data product. Fig. 12 will be removed.
