Interactive comment on “Re-evaluation of the 1950–1962 total ozone record from Longyearbyen, Svalbard” by C. Vogler et al.

C. Vogler et al.

Received and published: 28 June 2006

Comment by Georg Hansen: Both reviewers noted, correctly, that the use of TOMS version 7 is no longer appropriate since there is a newer version available. In fact, we used TOMS version 8 data, but were not aware of it until recently. We used the online TOMS data from the station list directory, which was updated continuously. A check with the TOMS version 8 data set on DVD revealed that we used vs. 8. We shall change the wording in the manuscript accordingly. Referee#2 also remarked that the WOUDC only contains Longyearbyen data from 1957 to 1966, while we refer to data until 1968. A recent investigation revealed that the data from November 1966 to December 1968 are archived under Ny-Ålesund (STN089). It thus seems that the instrument already was moved around at that time, not only in the 1990s. More comprehensive answers to the other issues addressed by the referees are in preparation by the first author.
