Interactive comment on “Differences between ground Dobson, Brewer and satellite TOMS-8, GOME-WFDOAS total ozone observations at Hradec Kralove, Czech” by K. Vanicek

K. Vanicek

Received and published: 3 August 2006

Author Comment on the RC S2092

Results published in Weber et al., ACP, 2005, that are relevant to the submitted paper, will be more extensively cited and the list of reference will be revised for non reviewed papers in the final manuscript according to the referee's suggestions.

A more detailed description of the theoretical background would extend the manuscript by several pages. Though the theory related to the studied problems is well described in the cited references the author will add formulae for calculation of total ozone from Dobson and Brewer observations that are important for understanding of the presented conclusions.
