

Interactive comment on “A global emission inventory of carbonaceous aerosol from historic records of fossil fuel and biofuel consumption for the period 1860–1997” by C. Junker and C. Liousse

Anonymous Referee #3

Received and published: 5 August 2006

In my review, I stated: "Some values [of emission factors] such as hard coal do not look like either BC or PM from Cooke et al (1999)." I had compared the values from the present paper with the Cooke et al emission factors for BC, and BC plus OC, and was unable to find a match.

I later observed that the BC emission factors do match the Cooke et al submicron emission factors exactly. I had previously compared with emissions of total PM. Thus the error is mine and not the authors', and I apologize.
