Comment

Interactive comment on “Atmospheric sulphuric acid and aerosol formation: implications from atmospheric measurements for nucleation and early growth mechanisms” by S.-L. Sihto et al.

S.-L. Sihto et al.

Received and published: 24 August 2006

Final response

We thank the referees for reviewing our manuscript and for the constructive comments to improve it. We have revised the manuscript according to the comments and will submit the final version of the paper to be published in ACP.

We have given our answers to the referee comments in separate Author comments. Most of the answers are included in the revised version of the manuscript, except the comments that were more technical in nature, for which we supposed that the answer given in the interactive author comment is sufficient. We have also checked the language as suggested by the other referee.
