## ***Interactive comment on “Mid-winter lower stratosphere temperatures in the Antarctic vortex: comparison between observations and ECMWF operational model.” by M. C. Parrondo et al.***

**M. C. Parrondo et al.**

Received and published: 12 September 2006

Reply to Interactive comment by M. Höpfner

We thank Michael Höpfner for his comments regarding two recent publications in ACP dealing with the same issue that clearly should be referenced. We will incorporate the work of Höpfner et al., 2006a, on ECMWF -McMurdo sondes comparison after the Gobiet et al., 2005, reference.

The second paper by Höpfner et al., 2006b, will be referenced as well since it constitutes an excellent example of the ECMWF bias consequence on PSC simulations. A sentence will be incorporated at the end of the discussion section.
