

Interactive comment on “On using radon-222 and CO₂ to calculate regional-scale CO₂ fluxes” by A. I. Hirsch

A. I. Hirsch

Received and published: 2 November 2006

In Table 2 of this paper, please ignore the horizontal line in the middle of the table. Also, Average NEE for the "July 500 m all hours" should be -0.4 micromoles per meter squared per second, rather than 0.4 (negative sign missing).
