

Interactive comment on “Identification and classification of the formation of intermediate ions measured in boreal forest” by A. Hirsikko et al.

A. Hirsikko et al.

Received and published: 12 December 2006

Final response

We acknowledge both referees for their constructive comments to improve our manuscript. We have responded to their comments and questions in detail by Author Comments published on the ACPD Web-pages.

We utilised the most of their proposals to improve and correct the manuscript when we finalised the manuscript for the final ACP-state. The points we disagreed in the Author Comments were not considered in the final manuscript.
