Interactive Comment

Interactive comment on "Scavenging of black carbon in mixed phase clouds at the high alpine site Jungfraujoch" by J. Cozic et al.

U. Baltensperger

urs.baltensperger@psi.ch

Received and published: 11 January 2007

I thank the referee for the time invested in this review. However, I would like to suggest that the referee turns the paper back to the editor in such a case. Clearly, a less bored referee would have been likely to provide a more helpful comment than this one. Describing a careful data analysis (which by the way produced new results not seen by anyone before, and which are highly important for the assessment of aerosols on climate) just as 'boring' is not really helpful. We will be happy to take care of the single specific comment to explain the boxplots better in the revised manuscript.
