Dear W. A. Lahoz et al.

Thank you for your reply.

First I would like to redraw my comment on figure 14. - You are right.

On all the other issues I find that the new formulations and other revisions you suggest are all improvements.

The only thing I have left on my pad is figure 1. I still think that, e.g. a dotted line indicating the UTLS and other features mentioned in the text, would increase the usability of this figure. I leave that to you and your co-authors to finally decide.

Best Regards
