Interactive comment on "The Coupled Aerosol and Tracer Transport model to the Brazilian developments on the Regional Atmospheric Modeling System (CATT-BRAMS) – Part 2: Model sensitivity to the biomass burning inventories" by K. M. Longo et al.

K. M. Longo et al.

saulo.freitas@cptec.inpe.br Received and published: 19 March 2010

This document contains the figures 1, 2 and 3 cited at reply to the reviewer 1.

Interactive comment on Atmos. Chem. Phys. Discuss., 7, 8571, 2007.

C10094

"The Coupled Aerosol and Tracer Transport model to the Brazilian developments on the Regional Atmospheric Modeling System (CATT-BRAMS) – Part 2: Model sensitivity to the biomass burning inventories" by K. M. Longo et al.

<u>Ouestions and Answers to Reviewer 1:</u> Figure 1

"The Coupled Aerosol and Tracer Transport model to the Brazilian developments on the Regional Atmospheric Modeling System (CATT-BRAMS) – Part 2: Model sensitivity to the biomass burning inventories" by K. M. Longo et al.

Questions and Answers to Reviewer 1: Figure 2

Figure 2. At left, near surface CO (ppb) from only urban-industrial-vehicular (RETRO) and biogenie (CELA-POET) emissions. At right, only biomass burning emissions (Aug-Sep-Oct, 2002 time mean).

Fig. 2.

C10096

"The Coupled Aerosol and Tracer Transport model to the Brazilian developments on the Regional Atmospheric Modeling System (CATT-BRAMS) – Part 2: Model sensitivity to the biomass burning inventories" by K. M. Longo et al.

Questions and Answers to Reviewer 1: Figure 3

Surface C0 difference (%, monthly mean) Figure 3. Difference of CO between two simulations (one includes RACM chemical mechanism, the other one treats CO as a tracer with lifetime of 30 days) in terms of monthly means for August and September 2002.
