Interactive comment on “Validation of MIPAS HNO₃ operational data” by D. Y. Wang et al.

Anonymous Referee #1

Received and published: 4 June 2007

The paper provides validation of the MIPAS operational data on HNO₃ retrievals by comparison with different kinds of satellite, balloon and air-borne observations. The comparison is very comprehensive and convincing. The manuscript is very well written and illustrated. To my opinion, it can be published as it stands.
