Interactive Comment

## Interactive comment on "An overview of snow photochemistry: evidence, mechanisms and impacts" by A. M. Grannas et al.

W. Sturges (Editor)

w.sturges@uea.ac.uk

Received and published: 8 June 2007

This comprehensive review has already engaged representatives from most of the principal teams currently involved in investigating this area of research. As a result it has proved difficult to secure referees who are truly independent of the writing team. Given this consideration, given that this a review, and given the favourable comments of the one referee who did kindly agreed to carry out a review, then I am prepared to allow this manuscript to progress to the ACP stage. The authors are encouraged to prepare a revised version of their manuscript, taking in to account the comments of the reviewer, for consideration for full and final publication in ACP.
