

Interactive comment on “An Asian emission inventory of anthropogenic emission sources for the period 1980–2020” by T. Ohara et al.

Anonymous Referee #2

Received and published: 19 July 2007

The authors of this paper deserve much thanks from the climate change / atmospheric science community. Their work provides a scientifically sound, comprehensive, integrated inventory of major air pollutants. Furthermore the spatial and temporal detail allows for more in-depth assessments of trends throughout Asia. The authors also provide discussion and references to other inventory development activities, strengthening their inventory as a result.
