Interactive comment on “Development and evaluation of an operational SDS forecasting system for East Asia: CUACE/DUST” by C. H. Zhou et al.

M. Ming

zhyb009@sohu.com

Received and published: 3 August 2007

The deadly mistake in this paper is that the author didn't prove the dust flux accorded with the actual data, therefore all of the conclusion are unlikehood. The author should give a figure to show the dust flux, compare the flux with desert, sandlot and wadi, prove the flux, the transportation and the deposition are all right, otherwise this paper is only a digital game.
