Received and published: 3 August 2007

Thanks for you comment on my paper, There is dust flux output in the unit of $\text{g}/\text{m}^2/\text{s}$ in 3 hrs interval average from CUACE/Dust for real time operational forecast. It is on the base of MBA scheme which has been carefully discribed in Gong S. L. 2003 and evalated in the paper from Zhao. T. L 2006.

Thank for the correction for the NIES web link.
