

Interactive comment on “Application of the Aventech AIMMS20AQ airborne probe for turbulence measurements during the Convective Storm Initiation Project” by K. M. Beswick et al.

A. Tuck

adrian.f.tuck@noaa.gov

Received and published: 10 March 2007

I would like to draw the attention of the authors to Lovejoy et al. (2004), Fractal aircraft trajectories and nonclassical turbulent statistics, Phys. Rev. E, 70, Art. No. 036306, doi: 10.1103/PhysRevE.70.036306. It is particularly relevant in the context of vertical motion and also to the expectation of $-5/3$ scaling.
