Interactive comment on "The wintertime two-day wave in the Polar Stratosphere, Mesosphere and lower Thermosphere" by D. J. Sandford et al.

L. Millan-Valle

millanvalle@atm.ox.ac.uk

Received and published: 3 December 2007

I believed some explanations for some of the terms introduced will be helpful for the reader. For instance, it should be explained what is the meaning of a wave wavenumber, what is a Meteor Radar, and an explanation for the period of 2 days of the wave (if available).

Apart from that it would be useful to know what amplitude of temperature variation is associated with these waves.

Fig 1b, should say something among the lines of, as for figure 1a for meridional winds.
