## ***Interactive comment on “Vertical distribution of ozone and VOCs in the low boundary layer of Mexico City” by E. Velasco et al.***

**E. Velasco et al.**

Received and published: 19 December 2007

The authors thank the comments and suggestions made by the reviewer. It is important to indicate that all vertical profiles presented in this manuscript were measured before the MILAGRO campaign in March 2006, and therefore cannot be directly correlated to measurements performed during MILAGRO. However, we expect the vertical evolution of the trace gases and the conductive boundary layer presented here will be useful to the analysis of the MILAGRO data.

All specific comments are discussed deeply in the document submitted together with the corrected manuscript. Two of the technical comments were included for further discussion there, the other technical comments were evaluated and most of them were incorporated in the revised manuscript.
