

## ***Interactive comment on “Online coupled meteorology and chemistry models: history, current status, and outlook” by Y. Zhang***

**Anonymous Referee #1**

Received and published: 27 March 2008

From my point of view this paper is not a review article. A review article should give a broad overview of the current status/knowledge in one research field. But the article by Zhang is much too much restricted to developments made in the US. Only US models are discussed in detail and many important (European and other) developments are missing or cited wrongly (see other short comments). Thus the article by Zhang does not at all fulfill the requirements of a review article.
