

## ***Interactive comment on “Quality assurance of the Brewer UV measurements in Finland” by K. Lakkala et al.***

### **Anonymous Referee #2**

Received and published: 30 March 2008

General comments: The paper presents a very useful contribution to UV science with Brewer spectroradiometers operating worldwide. This paper deals with the quality of spectral UV measurements. The paper is well organized. The autor cited adequately the relevant literature in this branch. The results for Finnish Brewers indicate good wavelength accuracy and that the anomalies in the spectra are very rare.

Specific comments:

The measurements are performed at temperatures below 15 deg.C?
