Interactive Comment

Interactive comment on "Ice supersaturations and cirrus cloud crystal numbers" by M. Krämer et al.

M. Krämer et al.

Received and published: 6 February 2009

We thank both referees for their positive comments and helpful suggestions, which we will take into account in the revised version of the manuscript.

Especially, the quality of the ice crystal measurements will be discussed carefully for the lower and higher temperature range, the suggested references will be introduced and a native speaker from the language office of FZ Jülich will revise the manuscript before resubmission. Detailed answers to all the points raised will be submitted together with the revised manuscript.
