Interactive comment on “Satellite measurement based estimates of decadal changes in European nitrogen oxides emissions” by I. B. Konovalov et al.

I. B. Konovalov et al.

Received and published: 17 April 2008

We are thankful to the Referee for the positive evaluation of our paper.

The Referee made only a specific comment concerning the use of indexes and symbols in the text. In the revised version, the symbol N is no longer used in two different meanings. The superscript n disappears when we mean matrices (which have, implicitly, both spatial and temporal indexes) rather than vectors (for a given year). The matrices are marked in bold, while vectors are marked in bold italics, in accordance with the ACP standards. To avoid the confusion, we mentioned in the text that components of the matrices are double-indexed.
