

Interactive comment on “Why are estimates of global isoprene emissions so similar (and why is this not so for monoterpenes)?” by A. Arneth et al.

A. Arneth et al.

Received and published: 11 June 2008

Baerbel, thanks for reminding us that marine isoprene fluxes may indeed affect chemistry and SOA/cloud formation above the ocean, although the scaling that was applied in the Meskhidze and Nenes paper was criticized. I do not have an objection to adding a "terrestrial" to the title of the revised manuscript.
