

Interactive comment on “A combined particle trap/HTDMA hygroscopicity study of mixed inorganic/organic aerosol particles” by A. A. Zardini et al.

A. A. Zardini et al.

Received and published: 25 June 2008

We inserted (page 5247, line 16): "In recent EDB studies of 1:1 AS/GA mixtures, Ling and Chan (2008) observed deliquescence at 78 - 80% and efflorescence at 31 - 36% RH, while Lee et al. (2008) observed DRH at 80.9% for the first deliquescence of the particle and at slightly lower values for subsequent hygroscopicity cycles and efflorescence at approx 40% RH."
