

Interactive comment on “Aerosol optical properties in a rural environment near the mega-city Guangzhou, China: implications for regional air pollution and radiative forcing” by R. M. Garland et al.

R. M. Garland et al.

Received and published: 14 July 2008

We would like to thank CK Chan for the following comment.

We have recently published a review article: Chan C.K. and Yao X.H. (2008) “Air Pollution in Mega Cities in China - a Review” Atmospheric Environment, 42, 1-42.

It includes a major section on air pollution studies in the PRD. Authors and readers of the current manuscript may find the review article useful.

We have used the helpful discussion in this review paper to expand our Introduction Section to include more previous work in the PRD region.
