

Interactive comment on “Intercomparison of aerosol optical depth from Brewer ozone spectrophotometers and CIMEL sunphotometers measurements” by A. Cheymol et al.

Anonymous Referee #3

Received and published: 24 July 2008

In the present manuscript AOD measurements from Brewer instruments are evaluated using AERONET sun-photometer measurements as a reference. The manuscript is well and concisely written, the scientific content is relevant. The present study builds on, and extends, earlier studies referred to in the manuscript. I miss some explicit information on the added value of the present study in relation to earlier works, on what are the differences in data approach etc. I recommend publication in ACP after this point is clarified.
