Received and published: 20 March 2008

I would appreciate if the authors could update the references to the Meso-NH model in section 2.1. The Meso-NH model is a mesoscale (not global) model with on-line chemistry and aerosols. Therefore, I would recommend to cite this model in p1842 l20 with other european models. This model however has not been developped in the framework of the cited COST project.

The proper references for the model should be Tulet et al. (1999; 2003) for the online coupling of gas-phase chemistry and Tulet et al. (2005) for the online coupling of aerosol particles microphysics and chemistry.
