

Interactive comment on “Carbonyl sulfide in air extracted from a South Pole ice core: a 2000 year record” by M. Aydin et al.

M. Aydin et al.

Received and published: 23 November 2008

Based on the specific points the reviewer has raised, the manuscript has been revised as follows:

- The introduction section has been revised to include the major conclusions of the SPARC report #4 (2006) about the relative contributions of COS and SO₂ to stratospheric aerosol burden.
- The caption of Fig. 2 has been revised and now includes a description of open symbols as outliers.
