

Interactive comment on “Numerical simulations of contrail-to-cirrus transition – Part 2: Impact of initial ice crystal number, radiation, stratification, secondary nucleation and layer depth” by S. Unterstrasser and K. Gierens

S. Unterstrasser and K. Gierens

simon.unterstrasser@dlr.de

Received and published: 14 December 2009

We rewrote the abstract and think the message of the paper is clearer now.

We shortened the items in the conclusion section, as already recommended for Part 1.

Moreover, we went over the complete text again and tried to follow your general recommendations.

For details see reply to referee #2.
