General comments

This article presents an assessment of models performance in simulating marine stratocumulus clouds, in preparation to the VOCALS experiment. Even the paper does not provide new and innovative results, the assessment of models is a crucial step in international and multidisciplinary projects, hence it fully deserves publication.

Overall, the paper is well written and structured and I have not been able to find out any way to further improve it.

Detail comments.

Line 8: typo error “variation” is repeated twice
