# ***Interactive comment on “Aerosol analysis using a Proton-Transfer-Reaction Thermo-Desorption Mass Spectrometer (PTR-TD-MS): a new approach to study processing of organic aerosols” by R. Holzinger et al.***

**Anonymous Referee #1**

Received and published: 11 January 2010

Following up on aerosol concentration sensitivity in lab-generated SOA:

Kostenidou et al. (2009) saw that with a-pinene, b-pinene, limonene, and b-caryophyllene, more volatile SOA species were observed for higher precursor concentrations, where less volatile, more oxygenated SOA species resulted from lower precursor concentrations.
