Received and published: 2 April 2009

Dear Dr. Qiang Zhang and the coauthors,

Thank you for your compiling the recent emission inventory for Asian regions which is very useful for recent modeling and observation studies.

Simply, I would like to draw your attention to South Korean CO emission, which seems extremely low. Is the value plausible? For example in Table 7, such high BC/dCO ratio (dCO=CO-background CO) have not been observed. Would you please re-examine it?

Sincerely, Mizuo Kaino.
