Interactive comment on “Emissions from biomass burning in the Yucatan” by R. Yokelson et al.

J. Gaffney (Editor)

jsgaffney@ualr.edu

Received and published: 22 May 2009

Paper represents important results on chemical and physical characterization of biomass burning plumes during the MILAGRO campaign. The paper describes measurements and results in clear fashion although would suggest that the reference to "3" fires throughout the manuscript be spelled out as three fires to help the reader distinguish that from other references to the aircraft, etc.

Otherwise would recommend publication once the final manuscript addresses reviewers comments as outlined in the authors response to the other reviewer.
