

Interactive comment on “Similarity analysis of turbulent transport and dissipation for momentum, temperature, moisture, and CO₂ during BLLAST” by João A. Hackerott et al.

Anonymous Referee #2

Received and published: 5 April 2016

I have asked over 6 additional referees for this manuscript, without any response. Since this paper is outside my expertise, I cannot post my own review. In addition, the one very-critical review is from a thoroughly respected source. I thus can see no more to do, and will have to defer to this review. I can thus see no way of including the manuscript in the special issue.
