

Interactive comment on “Trends in normalized difference vegetation index (NDVI) associated with urban development in northern West Siberia” by Igor Esau et al.

Anonymous Referee #1

Received and published: 31 May 2016

The main goal of the paper "Trends in normalized difference vegetation index (NDVI) associated with urban development in northern West Siberia" is to investigate an impact of urban development on vegetation trends in different parts of the region. And I would like to note that this task is very well accomplished. Certainly, the main idea of article is clear, the title and abstract are appropriate and correspond to the content of the manuscript. The article topic is within the scope of a journal. I recommend to publish the article after a little technical corrections
