Received and published: 19 August 2016

On behalf of all co-authors I would like to thank the Referee #2 for giving his opinion on the comments raised by other referees, especially, for the contribution to the discussion on the intermittency of GWs.

I would like to ask the referee to follow the upcoming author responses to Ref#1 and Ref#3, where your points are going to emerge. In the end of the discussion, of course, we will summarize a response to your comments as well.

With many thanks, Petr Šácha.
