The manuscript has been improved upon its original version. I guess it good enough to be published in ACP, after some minor revision.

Minor Points

The authors should mention in the text the horizontal resolution of the ECMWF analysis data used in the study.

In Equation 1, 2 and 3, and throughout the text, use lower case for specific heat, instead of C_p , for it is more usual in literature.

Finally, a substantial grammar revision of the text is necessary.
