

## ***Interactive comment on “Transport of regional pollutants through a remote trans-Himalayan valley in Nepal” by Shradda Dhungel et al.***

### **Anonymous Referee #2**

Received and published: 10 December 2016

The manuscript reports data that is collected recently over a high altitude site and does not bring in any new insights or results. As the authors write, many results from the same group have been published recently. What is the relevance of connecting ozone and BC is not clear.

Many aspects are very loosely dealt with and mentioned in passing. References are missing.

Lines 285 - how this phenomenon can occur? What about lifetime of BC aerosols?

Conclusion - with the limited scope of the study the conclusions are far fetched.
