Received and published: 3 February 2017

Dear authors,

based on the two very critical referee comments on your ACPD manuscript, I would like to encourage you to withdraw your submission at this stage. The referee comments are of a kind that will require rewriting of most of the manuscript to take into account these points. Much of the scientific reasoning and also the key conclusions are questioned. I regret to inform you that based on these reports I want to discourage resubmission of a revised version to ACPD.

C1

Best regards

Thomas Röckmann
