Table S1: Initial dry aerosol radii for different bins.

Bin number	$r_{\text{dry}}$ (nm)	Bin number	$r_{\text{day}}$ (nm)
1	463.7	11	61.5
2	378.9	12	50.3
3	309.6	13	41.1
4	253.0	14	33.6
5	206.7	15	27.4
6	168.9	16	22.4
7	138.0	17	18.3
8	112.8	18	15.0
9	92.1	19	12.2
10	75.3	20	10.0

Figure S1: (a) Saturation ratio and (b) cloud droplet number concentration profiles for various cloud mixing fractions when monodisperse cloud droplets mix with clean environment air with low updraft velocity ( $0.1 \text{ ms}^{-1}$ ).

Figure S2: (a) Saturation ratio and (b) cloud droplet number concentration profiles for various cloud mixing fractions when monodisperse cloud droplets mix with polluted environment air with low updraft velocity ( $0.1 \text{ ms}^{-1}$ ).

Figure S3: (a) Saturation ratio and (b) cloud droplet number concentration profiles for various cloud mixing fractions when monodisperse cloud droplets mix with clean environment air with high updraft velocity ( $1.0 \text{ ms}^{-1}$ ).

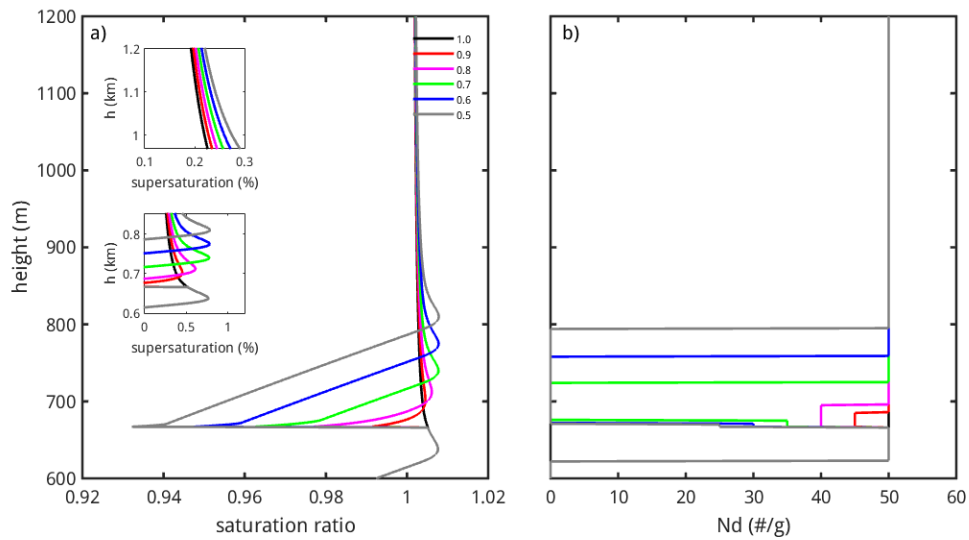

Figure S4: (a) Saturation ratio and (b) cloud droplet number concentration profiles for various cloud mixing fractions when monodisperse cloud droplets mix with polluted environment air with high updraft velocity ( $1.0 \text{ ms}^{-1}$ ).

Figure S5: (a) Saturation ratio and (b) cloud droplet number concentration profiles for various cloud mixing fractions when polydisperse cloud droplets mix with clean environment air with low updraft velocity ( $0.1 \text{ ms}^{-1}$ ).

Figure S6: (a) Saturation ratio and (b) cloud droplet number concentration profiles for various cloud mixing fractions when polydisperse cloud droplets mix with clean environment air with high updraft velocity ( $1.0 \text{ ms}^{-1}$ ).
