If the authors are able to upload larger/more legible figures for Fig. 3, 5 and 11 it would be most welcome. The axes labels in Fig. 5 are basically unreadable and the size distributions in Fig. 11 are way too small to be properly viewed. And in Fig. 11 the blue lines in the histograms are very difficult to see given the over-use of vertical grid lines. Having easier to read figures would certainly facilitate review.
