20

21 Figure S1: The map for the study site.

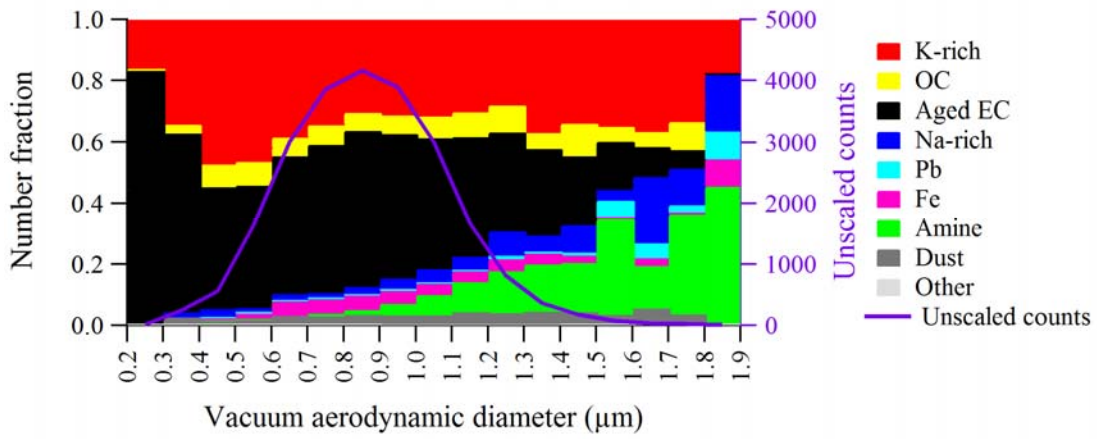

22

23

24 Figure S2: Size distribution and concentration (electrical mobility diameter 20-900 nm) of cloud
 25 residues was measured a scanning mobility particle sizer (SMPS). The data was corrected by
 26 enrichment factor of 5.25. Note that the SMPS occurred a failure on 02:00 -07:00 16 January and
 27 the system was set up manually switched method on 08:00 - 09:00 21 January.

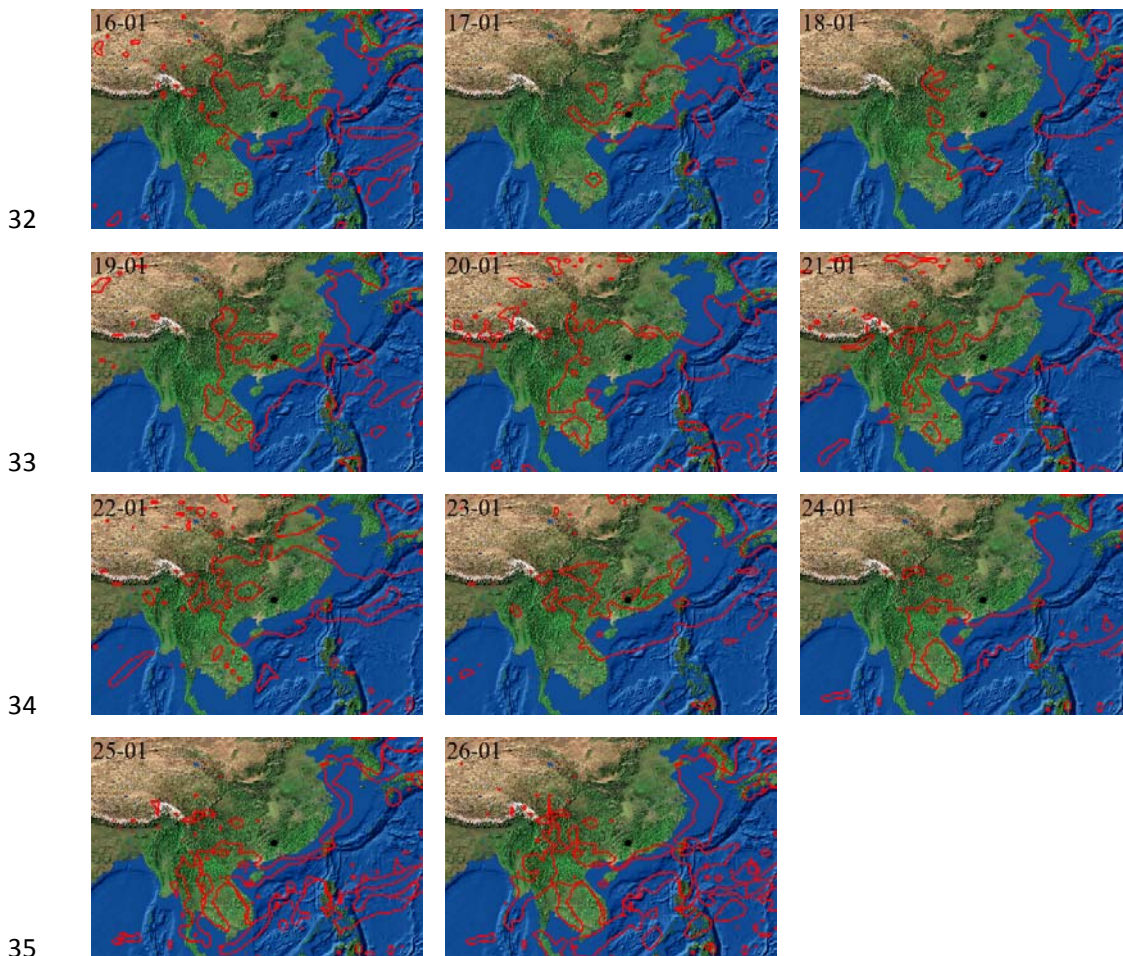

28

29

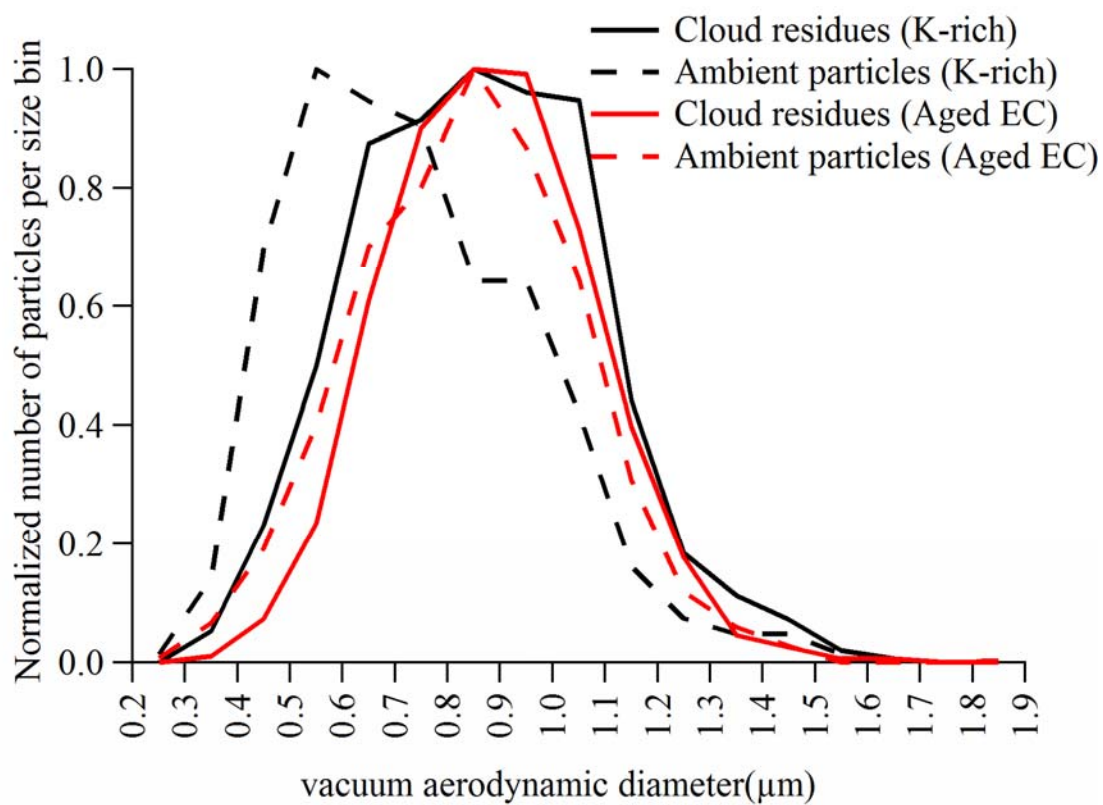

30 Figure S3: Number fraction for size distribution of cloud residual types.

31

36 Figure S4: Contour lines (red lines) of relative humidity 90% at 850 hPa (about 1,500 m
37 a.s.l). Data is available at <ftp://arlftp.arlhq.noaa.gov/pub/archives/gdas1/>.

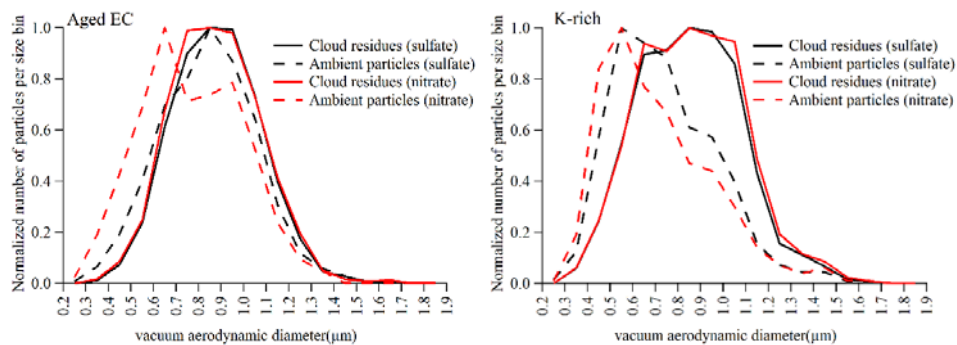

38

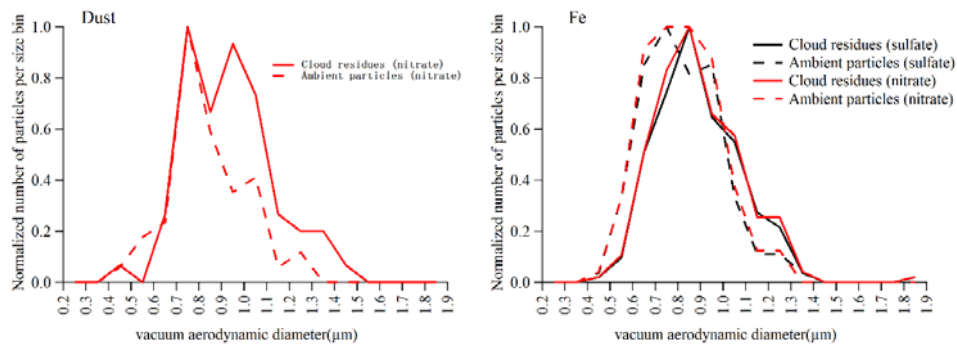

39

40 Figure S5. Size distributions of the K-rich and EC type for the comparison of cloud residual
 41 and ambient particles.

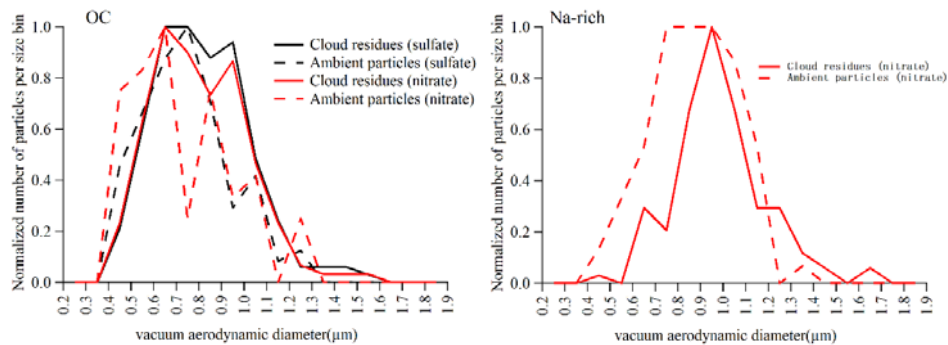

42

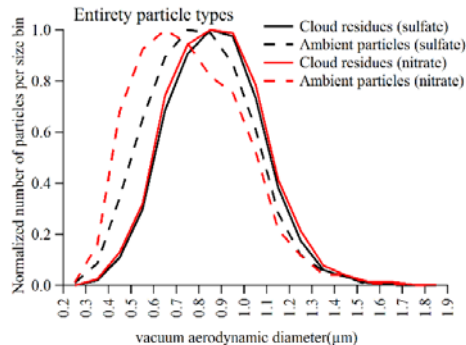

43

44

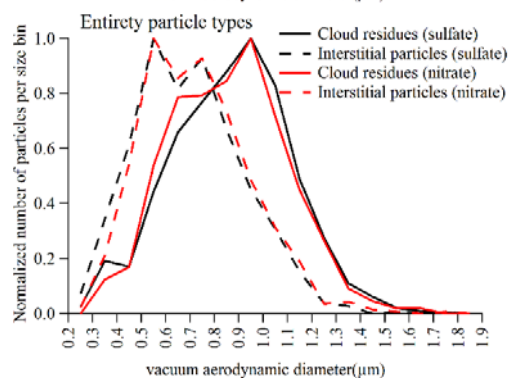

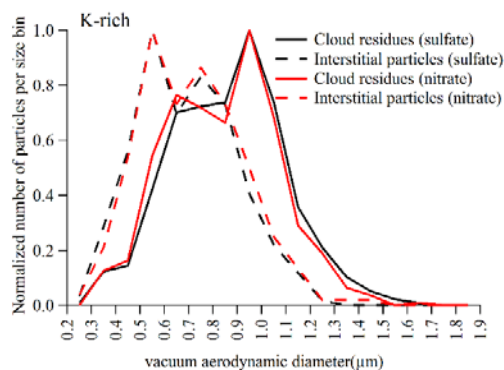

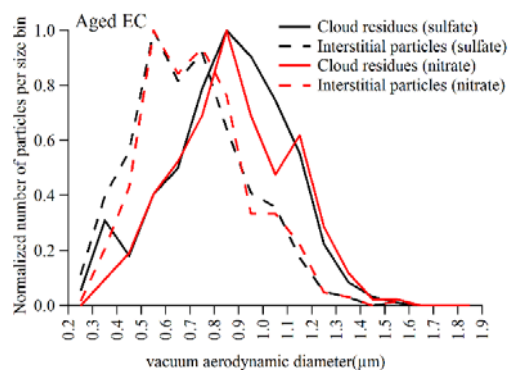

45

46

47 Figure S6: Size distributions of sulfate- and nitrate-containing cloud residual and ambient
 48 particles. Size distribution of sulfate- containing particles in the Na-rich and dust particle
 49 types was not conducted due to the low number sulfate-containing particles of the two
 50 types.

51

52

53

54 Figure S7: Size distributions of sulfate- and nitrate-containing particles for the EC and K-
 55 rich cloud residual and interstitial particles. The remainder of the particle types was not
 56 presented due to insufficient number particles.
